## Part I

# Documentation

## 1 Processing modes

Default commands:

`\psfig` Process this figure if no PDF, or new EPS;

`\psfig*` Always process this figure; and maybe,

`\psfig!` Never process this figure?

The following package options override the above: `[process=all]`, `[process=none]` (the default is `[process=auto]`).

## 2 Cropping graphics

Graphics are cropped to the appropriate size with the preview package. Sometimes, however, this will not be good enough when an inserted label protrudes from the natural bounding box of the figure. A good way to solve this problem is to use the pdfcrop program (requires a Perl installation under Windows). This can be activated in pstool with the [pdfcrop] package option.

## 3 Todo

1. Higher commands (\psfragfig, \matlabfig, \mathfig)
2. Generalise "olding" code for multiple files.
3. Check for correct behaviour in shells other than bash.
4. mylatex integration

## Part II

# Implementation

```
1 \ProvidesPackage{%  
    pstool}[2008/08/03_v0.2_Wrapper_for_processing_PostScript/psfrag_figures]
```

Initialisations

```
\if@pstool@always@ 2 \newif\if@pstool@always@  
\if@pstool@never@ 3 \newif\if@pstool@never@  
\if@pstool@oldpdf@ 4 \newif\if@pstool@oldpdf@  
\if@pstool@pdfcrop@ 5 \newif\if@pstool@pdfcrop@  
    \pstool@out 6 \newwrite\pstool@out
```

Package options

```
7 \RequirePackage{xkeyval}  
pdfcrop 8 \DeclareOptionX{pdfcrop}{\@pstool@pdfcrop@true}  
  
process 9 \define@choicekey*{pstool.sty}{process}[\@tempa\@tempb]{%  
    all,none,auto}{%  
10 \ifcase\@tempb\relax  
11 \@pstool@always@true  
12 \or  
13 \@pstool@never@true  
14 \or
```

```
15 \fi}
```

```
16 \ProcessOptionsX
```

External packages

```
17 \RequirePackage{%
    catchfile,color,ifpdf,ifplatform,inversepath,graphicx,suffix}
```

These are cute:

```
\OnlyIfFileExists 18 \providecommand\OnlyIfFileExists[2]{\IfFileExists{#1}{#2}{}}
\NotIfFileExists 19 \providecommand\NotIfFileExists[2]{\IfFileExists{#1}{#2}{}}
```

Command line abstractions between platforms:

```
20 \edef\pstool@cmdsep{\ifwindows\string&\else\string;\fi\space}
21 \edef\pstool@rm{\ifwindows\del\else\rm--\fi}
```

```
\pstool@try@rm 22 \newcommand\pstool@try@rm[1]{%
23 \for\@tempa:=#1\do{%
24 \OnlyIfFileExists{\@tempa}{\immediate\write18{%
    \pstool@rm"\@tempa"}}}}
```

It is necessary while executing commands on the shell to write the exit status to a temporary file to test for failures in processing.

```
\pstool@statusfile 25 \def\pstool@statusfile{status-deleteme.txt}
\pstool@writestatus 26 \def\pstool@writestatus{%
27 \ifwindows
28 echo\pstool@percentsign\ERRORLEVEL\@percentchar\space>\%
    \pstool@statusfile
29 \else
30 echo$?>\pstool@statusfile
31 \fi}
```

Write more to the file to ensure the buffer is flushed and the file is written to disk properly (allowing it to be read by \CatchFileEdef). (Maybe even a touch would be enough?)

```
\pstool@flushstatus 32 \def\pstool@flushstatus{%
33 \@tempcnta=0
34 \loop
35 \advance\@tempcnta by 1
36 \immediate\write18{%
37 cd"ip@directpath"\pstool@cmdsep
```

```

38     echo "\@percentchar_buffer_text">>\pstool@statusfile}%
39     \ifnum\@tempcnta<10\repeat}

```

```

\pstool@retrievestatus 40 \def\pstool@retrievestatus#1{%
41     \pstool@flushstatus
42     \CatchFileEdef{#1}{\ip@directpath\pstool@statusfile}{}%
43     \pstool@try@rm{\ip@directpath\pstool@statusfile}% uses \@tempa
        internally
44 }

```

use `ls` (or `dir`) to detect if the EPS is newer than the PDF:

```

\pstool@datefiles 45 \def\pstool@datefiles{%
46     \edef\pstool@filenames{\ip@lastelement.eps\space%
        \ip@lastelement.pdf\space}%
47     \immediate\write18{%
48         cd "\ip@directpath"\pstool@cmdsep
49         \ifwindows
50             dir_/T:W_/B_/O-D_"\ip@lastelement.eps"_%
                \ip@lastelement.pdf">\pstool@statusfile
51         \else
52             ls_-t_"\ip@lastelement.eps"_"\ip@lastelement.pdf">_%
                \pstool@statusfile
53         \fi}%
54     \pstool@retrievestatus\@tempb
55     \ifx\@tempb\pstool@filenames
56         \@pstool@oldpdf@true
57     \else
58         \@pstool@oldpdf@false
59     \fi}

```

Generic function to execute a command on the shell and pass its exit status back into L<sup>A</sup>T<sub>E</sub>X. Any number of `\pstool@exe` statements can be made consecutively followed by `\pstool@endprocess`, which also takes an argument. If *any* of the shell calls failed, then the execution immediately skips to the end and expands `\pstool@error` instead of the argument to `\pstool@endprocess`.

```

\pstool@exe 60 \def\pstool@exe#1{%
61     \immediate\write18{%
62         cd "\ip@directpath"\pstool@cmdsep
63         #1\pstool@cmdsep
64         \pstool@writestatus}%
65     \pstool@retrievestatus\@tempb
66     \ifnum\@tempb>_0
67         \PackageWarning{pstool}{%
            Execution_failed_during_process:^^J_#1^^J}%

```

```

68     \expandafter\pstool@abort
69     \fi}

```

Edit this definition to print something else when graphic processing fails.

```

\pstool@error 70 \def\pstool@error#1{\fbox{\color{red}%
               \ttfamily\An_error_occured_processing_this_graphic.}}

\pstool@abort 71 \def\pstool@abort#1\pstool@endprocess{\pstool@error}
72 \let\pstool@endprocess\@firstofone

```

## 4 Command parsing

User input is `\psfig` (with optional `*` or `!` suffix) which turns into one of the following three macros depending on the mode.

```

\pstool@alwaysprocess 73 \newcommand\pstool@alwaysprocess[3] [] {%
74     \inversepath*{#2}% calculate filename, path & inverse path
75     \pstool@process[#1]{#2}{#3}}

\pstool@neverprocess 76 \newcommand\pstool@neverprocess[3] [] {%
77     \includegraphics[#1]{#2}}

```

For regular operation, which processes the figure only if the command is starred, or the PDF doesn't exist.

```

\pstool@maybeprocess 78 \newcommand\pstool@maybeprocess[3] [] {%
79     \inversepath*{#2}% calculate filename, path & inverse path
80     \IfFileExists{#2.pdf}{%
81         \pstool@datefiles
82         \if@pstool@oldpdf@\expandafter\@firstoftwo
83         \else\expandafter\@secondoftwo\fi{%
84             \pstool@process[#1]{#2}{#3}%
85         }{%
86             \includegraphics[#1]{#2}}%
87     }{%
88         \pstool@process[#1]{#2}{#3}%
89     }}

```

### 4.1 User commands

Finally, define `\psfig` as appropriate for the mode:

```

90 \ifpdf
91     \if@pstool@always@

```

```

92     \let\psfig\pstool@alwaysprocess
\psfig 93     \WithSuffix\def\psfig!{\pstool@alwaysprocess}
\psfig* 94     \WithSuffix\def\psfig*{\pstool@alwaysprocess}
95     \else\if@pstool@never@
96     \let\psfig\pstool@neverprocess
\psfig 97     \WithSuffix\def\psfig!{\pstool@neverprocess}
\psfig* 98     \WithSuffix\def\psfig*{\pstool@neverprocess}
99     \else
100     \let\psfig\pstool@maybeprocess
\psfig 101     \WithSuffix\def\psfig!{\pstool@neverprocess}
\psfig* 102     \WithSuffix\def\psfig*{\pstool@alwaysprocess}
103     \fi\fi
104 \else
105     \let\psfig\pstool@neverprocess
\psfig 106     \WithSuffix\def\psfig!{\pstool@neverprocess}
\psfig* 107     \WithSuffix\def\psfig*{\pstool@neverprocess}
108 \fi

```

## 5 The figure processing

```

\pstool@process 109 \newcommand{\pstool@process}[3][{}]{%
110     \pstool@write@processfile{#1}{#2}{#3}%
111     \pstool@exe{latex_\shell-escape_\output-format=dvi
112         -interaction=batchmode_\ip@lastelement-process.tex"%
113     \pstool@exe{dvips_\ip@lastelement-process.dvi"%
114     \if@pstool@pdfcrop@
115         \pstool@exe{ps2pdf_\ip@lastelement-process.ps"_%
116             \ip@lastelement-process.pdf"%
117         \pstool@exe{pdfcrop_\ip@lastelement-process.pdf"_%
118             \ip@lastelement.pdf"%
119     \else
120         \pstool@exe{ps2pdf_\ip@lastelement-process.ps"_%
121             \ip@lastelement.pdf"%
122     \fi
123     \pstool@endprocess{\includegraphics[#1]{#2}}

```

The file that is written for processing is set up to read the preamble of the original document and set the graphic on an empty page (cropping to size is done either here with preview or later with pdfcrop).

```

\pstool@write@processfile 121 \def\pstool@write@processfile#1#2#3{%
122     \immediate\openout\pstool@out_\#2-process.tex\relax
123     \immediate\write\pstool@out{%
124         \unexpanded{%
125         \pdfoutput=0% force DVI mode if not already

```

Input the main document; redefine the document environment so only the preamble is read:

```

126          \let\origdocument\document
\document 127          \def\document{\endgroup\endinput}%
128          }\noexpand
129          \input{\ip@inversepath\jobname}%

```

Now the preamble of the process file: (restoring document's original meaning)

```

130          \if@pstool@pdfcrop@\else
131          \noexpand\usepackage[active,tightpage]{preview}
132          \fi
133          \unexpanded{%
134          \let\document\origdocument
135          \pagestyle{empty}% remove the page number
136          \begin{document}

```

And the document body to place the graphic on a page of its own:

```

137          \centering\null\vfill}%
138          \if@pstool@pdfcrop@\else
139          \noexpand\begin{preview}%
140          \fi
141          \unexpanded{#3}% this is the "psfrag" material
142          \noexpand\includegraphics[#1]{\ip@lastelement}%
143          \if@pstool@pdfcrop@\else
144          \noexpand\end{preview}%
145          \fi
146          \unexpanded{%
147          \vfill\end{document}}%
148          }%
149          \immediate\closeout\pstool@out}

```

*<eof>*
